EDUCATION

Master of Science in Engineering Management

Aug 2024 – May 2026

San Jose State University, San Jose, CA

GPA : 3.5/4

Relevant Courses: Operations Planning and Control, Project Management, Financial Methods, Lead Six Sigma, Project Management, Agile Methodologies, Product Management, Human Factors & Ergonomics, Systems Engineering, Negotiation & Conflict Management

Bachelor of Engineering in Electronics and Communication Engineering

Aug 2019 – Jun 2023

Visvesvaraya Technological University, Bengaluru, India

CGPA: 7.7/10

TECHNICAL SKILLS

Supply Chain & Procurement: Sourcing, RFQ Support, Supplier Coordination, BOM Review, Cost Comparison, Vendor Follow-up, Lead-Time Tracking, Purchase Order Support, Inventory Planning, MRP

Operations & Production Planning: Demand Forecasting, Master Production Scheduling, Capacity Planning, Production Planning, Material Requirements Planning, Forward Scheduling, Resource Planning, Process Mapping

Lean, Quality & Process Improvement: Lean Six Sigma, DMAIC, Value Stream Mapping, 5S, Root Cause Analysis, Bottleneck Analysis, Control Charts, Cp/Cpk, Process Capability Analysis

Project & Management Skills: Project Planning, Cross-Functional Coordination, Vendor Management, Schedule & Cost Control, Resource Planning, KPI Tracking

Data, Simulation & Project Tools: Advanced Excel, Power BI, Minitab, ProModel, SQL Basics, Python Basics, MS Project, ERP, SAP Exposure, QuoteWin, Jira, Smartsheet

PROFESSIONAL EXPERIENCE

Supply Chain Engineer – Sourcing & Procurement, Centum Electronics – Bangalore

Jul 2023 - Jul 2024

- Supported sourcing and RFQ activities for PCB, PCBA, and electronic components by reviewing BOMs, datasheets, supplier quotations, pricing, availability, lead times, and technical specifications.
- Coordinated with suppliers and internal teams across sourcing, engineering, planning, quality, and production to track material status, quote progress, delivery risks, and procurement updates using ERP and Quote Win.
- Assisted in supplier comparison, alternate sourcing, negotiation support, and cost analysis, contributing to approximately 10% cost reduction and up to 20% improvement in lead-time performance.
- Supported procurement follow-ups for customer programs across defense, aerospace, industrial, and automotive sectors while maintaining sourcing records, quotation data, and supplier communication updates.

Engineering Intern – Bharat Electronics Limited– Bangalore

Mar 2023 - Apr 2023

- Studied ship data networking systems, including ship area networks, gigabit Ethernet architecture, routing systems, SONAR communication, and satellite communication concepts.
- Gained exposure to defense electronics, technical documentation, engineering communication, and structured manufacturing environments.

ACADEMIC PROJECTS

Production Planning & Material Requirements Planning Project

- Developed an end-to-end operations planning model for a 108-guest event with a 118-guest planning buffer, using demand forecasting, master production scheduling, MRP, capacity planning, labor planning, and forward scheduling.
- Planned material, labor, and budget requirements within a \$4,000 constraint, estimating \$2,738.70 in raw materials, approximately \$255–\$270 in labor, \$1,000 in miscellaneous costs, and a total project cost of approximately \$3,963.70.

Statistical Analysis of Supplier Lead Time Variability

- Conducted multi-method statistical analysis (ANOVA, regression, Tukey's, Levene's, Kruskal-Wallis, I-MR control charts) on 177,659 supply chain order records in Minitab, identifying shipping mode as the dominant driver of lead time variability (34.5% of variation, $F = 31,164.38$, $p < 0.001$).
- Uncovered a scheduling miscalibration causing a 100% late-delivery rate across 27,814 First Class orders despite zero delivery variance, and recommended a schedule correction projected to cut total late deliveries by 27% with zero operational cost.

Healthcare Operations Improvement Using Value Stream Mapping

- Analyzed patient flow and waiting-time data to identify operational bottlenecks, with radiology wait times reaching approximately 41–45 minutes compared to only 5–8 minutes of doctor consultation time.
- Applied Lean Six Sigma tools including VSM, DMAIC, process mapping, bottleneck analysis, and improvement planning to recommend changes for reducing delays and improving resource utilization.

Automotive Paint Thickness Process Capability Analysis

- Evaluated paint thickness variation on curved automotive surfaces using Minitab, control charts, and process capability metrics, with $C_p = 0.47$ and $C_{pk} = 0.38$ indicating poor process capability.
- Recommended process improvements including path planning, calibration, SOP standardization, operator training, and variation reduction to improve coating consistency and process control.

CERTIFICATIONS

- Lean Six Sigma Green Belt | Supply Chain Planning & Designing with Excel and Python
